Figure 10: Definitions for auxiliary semantic functions

2 Proofs

Lemma 1 (Consistency reduces to equality when comparing static types). If T_1 and T_2 are static types then $T_1 = T_2 \iff T_1 \sim T_2$.

Proof. We proceed by structural induction on T_1 .

Base cases:

- $T_1 = Int$.
 - If Int = Int then, by the definition of \sim , $Int \sim Int$.
 - If $Int \sim Int$, then Int = Int.
- $T_1 = Bool$.
 - If Bool = Bool then, by the definition of \sim , $Bool \sim Bool$.
 - If $Bool \sim Bool$, then Bool = Bool.

Induction step:

- $T_1 = T_{11} \to T_{12}$.
 - If $T_{11} \to T_{12} = T_{21} \to T_{22}$, for some T_{21} and T_{22} , then $T_{11} = T_{21}$ and $T_{12} = T_{22}$. By the induction hypothesis, $T_{11} \sim T_{21}$ and $T_{12} \sim T_{22}$. Therefore, by the definition of \sim , $T_{11} \to T_{12} \sim T_{21} \to T_{22}$.
 - If $T_{11} \to T_{12} \sim T_2$, then by the definition of \sim , $T_2 = T_{21} \to T_{22}$ and $T_{11} \sim T_{21}$ and $T_{12} \sim T_{22}$. By the induction hypothesis, $T_{11} = T_{21}$ and $T_{12} = T_{22}$. Therefore, $T_{11} \to T_{12} = T_{21} \to T_{22}$.
- $T_1 = T_{11} \cap ... \cap T_{1n}$.
 - If $T_{11} \cap \ldots \cap T_{1n} = T_2$, then $\exists T_{21} \ldots T_{2n}$. $T_2 = T_{21} \cap \ldots \cap T_{2n}$ and $T_{11} = T_{21}$ and ... and $T_{1n} = T_{2n}$. By the induction hypothesis, $T_{11} \sim T_{21}$ and ... and $T_{1n} \sim T_{2n}$. Therefore, by the definition of \sim , $T_{11} \cap \ldots \cap T_{1n} \sim T_{21} \cap \ldots \cap T_{2n}$.
 - If $T_{11} \cap \ldots \cap T_{1n} \sim T_2$, then either:
 - * $\exists T_{21} ... T_{2n} . T_2 = T_{21} \cap ... \cap T_{2n}$ and $T_{11} \sim T_{21}$ and ... and $T_{1n} \sim T_{2n}$. By the induction hypothesis, $T_{11} = T_{21}$ and ... and $T_{1n} = T_{2n}$. Therefore, $T_{11} \cap ... \cap T_{1n} = T_{21} \cap ... \cap T_{2n}$.
 - * $T_{11} \sim T_2$ and ... and $T_{1n} \sim T_2$. By the induction hypothesis, $T_{11} = T_2$ and ... and $T_{1n} = T_2$. As $T_2 \cap \ldots \cap T_2 = T_2$, then $T_{11} \cap \ldots \cap T_{1n} = T_2$.

Theorem 1 (Conservative Extension). Depends on Lemma 1. If e is fully static and T is a static type, then $\Gamma \vdash_{\cap S} e : T \iff \Gamma \vdash_{\cap G} e : T$.

Proof. We proceed by induction on the length of the derivation tree of $\vdash_{\cap S}$ and $\vdash_{\cap G}$ for the right and left direction of the implication, respectively.

Base cases:

- Rule T-Var.
 - If $\Gamma \vdash_{\cap S} x : T$, then $x : T \in \Gamma$. Therefore, $\Gamma \vdash_{\cap G} x : T$.
 - If $\Gamma \vdash_{\cap G} x : T$, then $x : T \in \Gamma$. Therefore, $\Gamma \vdash_{\cap S} e : T$.
- Rule T-Int.
 - If $\Gamma \vdash_{\cap S} n : Int$, then $\Gamma \vdash_{\cap G} n : Int$.
 - If $\Gamma \vdash_{\cap G} n : Int$, then $\Gamma \vdash_{\cap S} n : Int$.
- Rule T-True.
 - If $\Gamma \vdash_{\cap S} true : Bool$, then $\Gamma \vdash_{\cap G} true : Bool$.
 - If $\Gamma \vdash_{\cap G} true : Bool$, then $\Gamma \vdash_{\cap S} true : Bool$.
- Rule T-False.
 - If $\Gamma \vdash_{\cap S} false : Bool$, then $\Gamma \vdash_{\cap G} false : Bool$.
 - If $\Gamma \vdash_{\cap G} false : Bool$, then $\Gamma \vdash_{\cap S} false : Bool$.

- Rule T-Abs.
 - If $\Gamma \vdash_{\cap S} \lambda x : T_1 \cap \ldots \cap T_n : e : T_1 \cap \ldots \cap T_n \to T$, then $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap S} e : T$. By the induction hypothesis, $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap G} e : T$. Therefore, $\Gamma \vdash_{\cap G} \lambda x : T_1 \cap \ldots \cap T_n : e : T_1 \cap \ldots \cap T_n \to T$.
 - If $\Gamma \vdash_{\cap G} \lambda x : T_1 \cap \ldots \cap T_n : e : T_1 \cap \ldots \cap T_n \rightarrow T$, then $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap G} e : T$. By the induction hypothesis, $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap S} e : T$. Therefore, $\Gamma \vdash_{\cap S} \lambda x : T_1 \cap \ldots \cap T_n : e : T_1 \cap \ldots \cap T_n \rightarrow T$.
- Rule T-Abs'.
 - If $\Gamma \vdash_{\cap S} \lambda x : T_1 \cap \ldots \cap T_n : e : T_i \to T$, then $\Gamma, x : T_i \vdash_{\cap S} e : T$. By the induction hypothesis, $\Gamma, x : T_i \vdash_{\cap G} e : T$. Therefore, $\Gamma \vdash_{\cap G} \lambda x : T_1 \cap \ldots \cap T_n : e : T_i \to T$.
 - If $\Gamma \vdash_{\cap G} \lambda x : T_1 \cap \ldots \cap T_n : e : T_i \to T$, then $\Gamma, x : T_i \vdash_{\cap G} e : T$. By the induction hypothesis, $\Gamma, x : T_i \vdash_{\cap S} e : T$. Therefore, $\Gamma \vdash_{\cap S} \lambda x : T_1 \cap \ldots \cap T_n : e : T_i \to T$.
- Rule T-App.
 - If $\Gamma \vdash_{\cap S} e_1 e_2 : T$ then $\Gamma \vdash_{\cap S} e_1 : T_1 \cap \ldots \cap T_n \to T$ and $\Gamma \vdash_{\cap S} e_2 : T_1 \cap \ldots \cap T_n$. By the induction hypothesis, $\Gamma \vdash_{\cap G} e_1 : T_1 \cap \ldots \cap T_n \to T$ and $\Gamma \vdash_{\cap G} e_2 : T_1 \cap \ldots \cap T_n$. By the definition of \triangleright , $T_1 \cap \ldots \cap T_n \to T \triangleright T_1 \cap \ldots \cap T_n \to T$. By the definition of \sim , $T_1 \cap \ldots \cap T_n \sim T_1 \cap \ldots \cap T_n$. Therefore, $\Gamma \vdash_{\cap G} e_1 e_2 : T$.
 - If $\Gamma \vdash_{\cap G} e_1 e_2 : T$ then $\Gamma \vdash_{\cap G} e_1 : PM$, $PM \rhd T_1 \cap \ldots \cap T_n \to T$, $\Gamma \vdash_{\cap G} e_2 : T'_1 \cap \ldots \cap T'_n$ and $T'_1 \cap \ldots \cap T'_n \sim T_1 \cap \ldots \cap T_n$. By the definition of \rhd , $PM = T_1 \cap \ldots \cap T_n \to T$, therefore $\Gamma \vdash_{\cap G} e_1 : T_1 \cap \ldots \cap T_n \to T$. By Lemma 1, $T'_1 \cap \ldots \cap T'_n = T_1 \cap \ldots \cap T_n$, and therefore $\Gamma \vdash_{\cap G} e_2 : T_1 \cap \ldots \cap T_n$. By the induction hypothesis, $\Gamma \vdash_{\cap S} e_1 : T_1 \cap \ldots \cap T_n \to T$ and $\Gamma \vdash_{\cap S} e_2 : T_1 \cap \ldots \cap T_n$. Therefore, $\Gamma \vdash_{\cap S} e_1 e_2 : T$.
- Rule T-Gen.

- If $\Gamma \vdash_{\cap S} e : T_1 \cap \ldots \cap T_n$ then $\Gamma \vdash_{\cap S} e : T_1$ and ... and $\Gamma \vdash_{\cap S} e : T_n$. By the induction hypothesis, $\Gamma \vdash_{\cap G} e : T_1$ and ... and $\Gamma \vdash_{\cap G} e : T_n$. Therefore, $\Gamma \vdash_{\cap G} e : T_1 \cap \ldots \cap T_n$.
- If $\Gamma \vdash_{\cap G} e : T_1 \cap \ldots \cap T_n$ then $\Gamma \vdash_{\cap G} e : T_1$ and ... and $\Gamma \vdash_{\cap G} e : T_n$. By the induction hypothesis, $\Gamma \vdash_{\cap S} e : T_1$ and ... and $\Gamma \vdash_{\cap S} e : T_n$. Therefore $\Gamma \vdash_{\cap S} e : T_1 \cap \ldots \cap T_n$.

• Rule T-Inst.

- If $\Gamma \vdash_{\cap S} e : T_i$ then $\Gamma \vdash_{\cap S} e : T_1 \cap \ldots \cap T_n$, such that $T_i \in \{T_1, ..., T_n\}$. By the induction hypothesis, $\Gamma \vdash_{\cap G} e : T_1 \cap \ldots \cap T_n$. As $T_i \in \{T_1, ..., T_n\}$, then $\Gamma \vdash_{\cap G} e : T_i$.
- If $\Gamma \vdash_{\cap G} e : T_i$ then $\Gamma \vdash_{\cap G} e : T_1 \cap \ldots \cap T_n$, such that $T_i \in \{T_1, \ldots, T_n\}$. By the induction hypothesis, $\Gamma \vdash_{\cap S} e : T_1 \cap \ldots \cap T_n$. As $T_i \in \{T_1, \ldots, T_n\}$, then $\Gamma \vdash_{\cap S} e : T_i$.

Theorem 2 (Monotonicity w.r.t. precision). If $\Gamma \vdash_{\cap G} e : T$ and $e' \sqsubseteq e$ then $\Gamma \vdash_{\cap G} e' : T'$ and $T' \sqsubseteq T$.

Proof. We proceed by induction on the length of the derivation tree of $\Gamma \vdash_{\cap G} e : T$.

Base cases:

- Rule T-Var. If $\Gamma \vdash_{\cap G} x : T$ and $x \sqsubseteq x$, then $\Gamma \vdash_{\cap G} x : T$ and $T \sqsubseteq T$.
- Rule T-Int. If $\Gamma \vdash_{\cap G} n : Int$ and $n \sqsubseteq n$, then $\Gamma \vdash_{\cap G} n : Int$ and $Int \sqsubseteq Int$.
- Rule T-True. If $\Gamma \vdash_{\cap G} true : Bool$ and $true \sqsubseteq true$, then $\Gamma \vdash_{\cap G} true : Bool$ and $Bool \sqsubseteq Bool$.
- Rule T-False. If $\Gamma \vdash_{\cap G} false : Bool$ and $false \sqsubseteq false$, then $\Gamma \vdash_{\cap G} false : Bool$ and $Bool \sqsubseteq Bool$.

- Rule T-Abs. If $\Gamma \vdash_{\cap G} \lambda x : T_1 \cap \ldots \cap T_n \cdot e : T_1 \cap \ldots \cap T_n \to T$ and $\lambda x : T'_1 \cap \ldots \cap T'_n \cdot e' \sqsubseteq \lambda x : T_1 \cap \ldots \cap T_n \cdot e$, then by rule T-Abs, $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap G} e : T$, and by the definition of \sqsubseteq , $T'_1 \cap \ldots \cap T'_n \sqsubseteq T_1 \cap \ldots \cap T_n$ and $e' \sqsubseteq e$. By the induction hypothesis, $\Gamma, x : T'_1 \cap \ldots \cap T'_n \vdash_{\cap G} e' : T'$ and $T' \sqsubseteq T$. By rule T-Abs, $\Gamma \vdash_{\cap G} \lambda x : T'_1 \cap \ldots \cap T'_n \cdot e' : T'_1 \cap \ldots \cap T'_n \to T'$, and by the definition of \sqsubseteq , $T'_1 \cap \ldots \cap T'_n \to T' \sqsubseteq T_1 \cap \ldots \cap T_n \to T$.
- Rule T-Abs'. If $\Gamma \vdash_{\cap G} \lambda x : T_1 \cap \ldots \cap T_n \cdot e : T_i \to T \text{ and } \lambda x : T'_1 \cap \ldots \cap T'_n \cdot e' \sqsubseteq \lambda x : T_1 \cap \ldots \cap T_n \cdot e$, then by rule T-Abs', $\Gamma, x : T_i \vdash_{\cap G} e : T$, and by the definition of \sqsubseteq , $T'_1 \cap \ldots \cap T'_n \sqsubseteq T_1 \cap \ldots \cap T_n$ and $e' \sqsubseteq e$. By the induction hypothesis, $\Gamma, x : T'_i \vdash_{\cap G} e' : T'$ and $T' \sqsubseteq T$. By rule T-Abs', $\Gamma \vdash_{\cap G} \lambda x : T'_1 \cap \ldots \cap T'_n \cdot e' : T'_i \to T'$, and by the definition of \sqsubseteq , $T'_i \to T' \sqsubseteq T_i \to T$.
- Rule T-App. If $\Gamma \vdash_{\cap G} e_1 e_2 : T$ and $e'_1 e'_2 \sqsubseteq e_1 e_2$ then by rule T-App, $\Gamma \vdash_{\cap G} e_1 : PM$, $PM \rhd T_{11} \cap \ldots \cap T_{1n} \to T$, $\Gamma \vdash_{\cap G} e_2 : T_{21} \cap \ldots \cap T_{2n}$, and $T_{21} \cap \ldots \cap T_{2n} \sim T_{11} \cap \ldots \cap T_{1n}$, and by the definition of \sqsubseteq , $e'_1 \sqsubseteq e_1$ and $e'_2 \sqsubseteq e_2$. By the induction hypothesis, $\Gamma \vdash_{\cap G} e'_1 : PM'$ and $PM' \sqsubseteq PM$ and $PM' \rhd T'_{11} \cap \ldots \cap T'_{1n} \to T'$ and $\Gamma \vdash_{\cap G} e'_2 : T'_{21} \cap \ldots \cap T'_{2n}$ and $T'_{21} \cap \ldots \cap T'_{2n} \subseteq T_{21} \cap \ldots \cap T'_{2n}$ and $T'_{21} \cap \ldots \cap T'_{2n} \subset T'_{2n} \subseteq T_{2n} \cap \ldots \cap T'_{2n} \subseteq T'_{2n} \cap \ldots \cap T'_{2n} \cap \ldots \cap T'_{2n} \subseteq T'_{2n} \cap \ldots \cap T'_{2n} \cap \ldots \cap T'_{2n} \subseteq T'_{2n} \cap \ldots \cap T'_{2n} \cap T'_{2n} \cap \ldots \cap T'_{2n} \cap \ldots \cap T'_{2n} \cap T'_{2n} \cap T'_{2n} \cap \ldots \cap T'_{2n} \cap T$

- Rule T-Gen. If $\Gamma \vdash_{\cap G} e : T_1 \cap \ldots \cap T_n$ and $e' \sqsubseteq e$, then by rule T-Gen, $\Gamma \vdash_{\cap G} e : T_1$ and \ldots and $\Gamma \vdash_{\cap G} e : T_n$. By the induction hypothesis, $\Gamma \vdash_{\cap G} e' : T'_1$ and $T'_1 \sqsubseteq T_1$ and \ldots and $\Gamma \vdash_{\cap G} e' : T'_n$ and $T'_n \sqsubseteq T_n$. Then by rule T-Gen, $\Gamma \vdash_{\cap G} e' : T'_1 \cap \ldots \cap T'_n$ and by the definition of \sqsubseteq , $T'_1 \cap \ldots \cap T'_n \sqsubseteq T_1 \cap \ldots \cap T_n$.
- Rule T-Inst. If $\Gamma \vdash_{\cap G} e : T_i$ and $e' \sqsubseteq e$, then by rule T-Inst, $\Gamma \vdash_{\cap G} e : T_1 \cap \ldots \cap T_n$ such that $T_i \in \{T_1, \ldots, T_n\}$. By the induction hypothesis, $\Gamma \vdash_{\cap G} e' : T'_1 \cap \ldots \cap T'_n$ and $T'_1 \cap \ldots \cap T'_n \sqsubseteq T_1 \cap \ldots \cap T_n$. Therefore, by rule T-Inst, $\Gamma \vdash_{\cap G} e' : T'_i$ and by the definition of \sqsubseteq , $T'_i \sqsubseteq T_i$.

Theorem 3 (Type preservation of cast insertion). If $\Gamma \vdash_{\cap G} e : T$ then $\Gamma \vdash_{\cap CC} e \leadsto e' : T$ and $\Gamma \vdash_{\cap CC} e' : T$.

Proof. We proceed by induction on the length of the derivation tree of $\Gamma \vdash_{\cap G} e : T$.

Base cases:

- Rule T-Var. If $\Gamma \vdash_{\cap G} x : T$, then by rule T-Var, $x : T \in \Gamma$. By rule C-Var, $\Gamma \vdash_{\cap CC} x \leadsto x : T$ and by rule T-Var, $\Gamma \vdash_{\cap CC} x : T$.
- Rule T-Int. As $\Gamma \vdash_{\cap G} n : Int$, then by rule C-Int, $\Gamma \vdash_{\cap CC} n \leadsto n : Int$ and by rule T-Int, $\Gamma \vdash_{\cap CC} n : Int$.
- Rule T-True. As $\Gamma \vdash_{\cap G} true : Bool$, then by rule C-True, $\Gamma \vdash_{\cap CC} true \leadsto true : Bool$ and by rule T-True, $\Gamma \vdash_{\cap CC} true : Bool$.
- Rule T-False. As $\Gamma \vdash_{\cap G} false : Bool$, then by rule C-False, $\Gamma \vdash_{\cap CC} false \leadsto false : Bool$ and by rule T-False, $\Gamma \vdash_{\cap CC} false : Bool$, it is proved.

- Rule T-Abs. If $\Gamma \vdash_{\cap G} \lambda x : T_1 \cap \ldots \cap T_n \cdot e : T_1 \cap \ldots \cap T_n \to T$ then by rule T-Abs, $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap G} e : T$. By the induction hypothesis, $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap CC} e \leadsto e' : T$ and $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap CC} e' : T$. By rule C-Abs, $\Gamma \vdash_{\cap CC} \lambda x : T_1 \cap \ldots \cap T_n \cdot e \leadsto \lambda x : T_1 \cap \ldots \cap T_n \cdot e' : T_1 \cap \ldots \cap T_n \to T$ and by rule T-Abs, $\Gamma \vdash_{\cap CC} \lambda x : T_1 \cap \ldots \cap T_n \cdot e' : T_1 \cap \ldots \cap T_n \to T$.
- Rule T-Abs'. If $\Gamma \vdash_{\cap G} \lambda x : T_1 \cap \ldots \cap T_n$. $e : T_i \to T$ then by rule T-Abs', $\Gamma, x : T_i \vdash_{\cap G} e : T$. By the induction hypothesis, $\Gamma, x : T_i \vdash_{\cap CC} e \leadsto e' : T$ and $\Gamma, x : T_i \vdash_{\cap CC} e' : T$. By rule C-Abs', $\Gamma \vdash_{\cap CC} \lambda x : T_1 \cap \ldots \cap T_n$. $e \leadsto \lambda x : T_1 \cap \ldots \cap T_n$. $e' : T_i \to T$ and by rule T-Abs', $\Gamma \vdash_{\cap CC} \lambda x : T_1 \cap \ldots \cap T_n$. $e' : T_i \to T$.
- Rule T-App. If $\Gamma \vdash_{\cap G} e_1 e_2 : T$ then by rule T-App, $\Gamma \vdash_{\cap G} e_1 : PM$, $PM \rhd T_1 \cap \ldots \cap T_n \to T$, $\Gamma \vdash_{\cap G} e_2 : T'_1 \cap \ldots \cap T'_n$ and $T'_1 \cap \ldots \cap T'_n \sim T_1 \cap \ldots \cap T_n$. By the induction hypothesis, $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : PM$ and $\Gamma \vdash_{\cap CC} e'_1 : PM$, and $\Gamma \vdash_{\cap CC} e_2 \leadsto e'_2 : T'_1 \cap \ldots \cap T'_n$ and $\Gamma \vdash_{\cap CC} e'_2 : T'_1 \cap \ldots \cap T'_n$. Therefore, by rule C-App, $\Gamma \vdash_{\cap CC} e_1 e_2 \leadsto e''_1 e''_2 : T$. By the definition of \unlhd and S, S, $e \hookrightarrow e$, by rule T-Intersection Cast, $\Gamma \vdash_{\cap CC} e''_1 : T_1 \to T \cap \ldots \cap T_n \to T$ and $\Gamma \vdash_{\cap CC} e''_2 : T_1 \cap \ldots \cap T_n$. By rule T-App', $\Gamma \vdash_{\cap CC} e''_1 e''_2 : T \cap \ldots \cap T$ and then by the properties of intersection types (modulo repetitions), $\Gamma \vdash_{\cap CC} e''_1 e''_2 : T$.

- Rule T-Gen. If $\Gamma \vdash_{\cap G} e : T_1 \cap \ldots \cap T_n$ then by rule T-Gen, $\Gamma \vdash_{\cap G} e : T_1$ and \ldots and $\Gamma \vdash_{\cap CC} e : T_n$. By the induction hypothesis, $\Gamma \vdash_{\cap CC} e \rightsquigarrow e' : T_1$ and \ldots and $\Gamma \vdash_{\cap CC} e \rightsquigarrow e' : T_n$, and $\Gamma \vdash_{\cap CC} e' : T_1$ and \ldots and $\Gamma \vdash_{\cap CC} e' : T_n$. By rule C-Gen, $\Gamma \vdash_{\cap CC} e \rightsquigarrow e' : T_1 \cap \ldots \cap T_n$ and by rule T-Gen, $\Gamma \vdash_{\cap CC} e' : T_1 \cap \ldots \cap T_n$.
- Rule T-Inst. If $\Gamma \vdash_{\cap G} e : T_i$ then by rule T-Inst, $\Gamma \vdash_{\cap G} e : T_1 \cap \ldots \cap T_n$, such that $T_i \in \{T_1, \ldots, T_n\}$. By the induction hypothesis, $\Gamma \vdash_{\cap CC} e \leadsto e' : T_1 \cap \ldots \cap T_n$ and $\Gamma \vdash_{\cap CC} e' : T_1 \cap \ldots \cap T_n$. By rule C-Inst, $\Gamma \vdash_{\cap CC} e \leadsto e' : T_i$ and by rule T-Inst, $\Gamma \vdash_{\cap CC} e' : T_i$.

Theorem 4 (Monotonicity w.r.t precision of cast insertion). If $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : T_1$ and $\Gamma \vdash_{\cap CC} e_2 \leadsto e'_2 : T_2$ and $e_1 \sqsubseteq e_2$ then $e'_1 \sqsubseteq e'_2$ and $T_1 \sqsubseteq T_2$.

Proof. We proceed by induction on the length of the derivation tree of $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : T$. Base cases:

- Rule C-Var. If $\Gamma \vdash_{\cap CC} x \leadsto x : T$ and $\Gamma \vdash_{\cap CC} x \leadsto x : T$, and $x \sqsubseteq x$, then $x \sqsubseteq x$ and $T \sqsubseteq T$.
- Rule C-Int. If $\Gamma \vdash_{\cap CC} n \leadsto n : Int$, $\Gamma \vdash_{\cap CC} n \leadsto n : Int$ and $n \sqsubseteq n$, then $n \sqsubseteq n$ and $Int \sqsubseteq Int$.
- Rule C-True. If $\Gamma \vdash_{\cap CC} true \leadsto true : Bool$, $\Gamma \vdash_{\cap CC} true \leadsto true : Bool$ and $true \sqsubseteq true$, then $true \sqsubseteq true$ and $Bool \sqsubseteq Bool$.
- Rule C-False. If $\Gamma \vdash_{\cap CC} false \leadsto false : Bool$, $\Gamma \vdash_{\cap CC} false \leadsto false : Bool$ and $false \sqsubseteq false$, then $false \sqsubseteq false$ and $Bool \sqsubseteq Bool$.

- Rule C-Abs. If $\Gamma \vdash_{\cap CC} \lambda x : T_{11} \cap \ldots \cap T_{1n} \cdot e_1 \leadsto \lambda x : T_{11} \cap \ldots \cap T_{1n} \cdot e_1' : T_{11} \cap \ldots \cap T_{1n} \to T_1$ and $\Gamma \vdash_{\cap CC} \lambda x : T_{21} \cap \ldots \cap T_{2n} \cdot e_2 \leadsto \lambda x : T_{21} \cap \ldots \cap T_{2n} \cdot e_2' : T_{21} \cap \ldots \cap T_{2n} \to T_2$ and $\lambda x : T_{11} \cap \ldots \cap T_{1n} \cdot e_1 \sqsubseteq \lambda x : T_{21} \cap \ldots \cap T_{2n} \cdot e_2$ then by rule C-Abs, $\Gamma, x : T_{11} \cap \ldots \cap T_{1n} \vdash_{\cap CC} e_1 \leadsto e_1' : T_1$ and $\Gamma, x : T_{21} \cap \ldots \cap T_{2n} \vdash_{\cap CC} e_2 \leadsto e_2' : T_2$ and by the definition of \sqsubseteq , $T_{11} \cap \ldots \cap T_{1n} \sqsubseteq T_{21} \cap \ldots \cap T_{2n}$ and $e_1 \sqsubseteq e_2$. By the induction hypothesis, $e_1' \sqsubseteq e_2'$ and $T_1 \sqsubseteq T_2$. Therefore, by the definition of \sqsubseteq , $\lambda x : T_{11} \cap \ldots \cap T_{1n} \cdot e_1' \sqsubseteq \lambda x : T_{21} \cap \ldots \cap T_{2n} \cdot e_2'$ and $T_{11} \cap \ldots \cap T_{1n} \to T_1 \sqsubseteq T_{21} \cap \ldots \cap T_{2n} \to T_2$.
- Rule C-Abs'. If $\Gamma \vdash_{\cap CC} \lambda x : T_{11} \cap \ldots \cap T_{1n} \cdot e_1 \leadsto \lambda x : T_{11} \cap \ldots \cap T_{1n} \cdot e_1' : T_{1i} \to T_1$, such that $T_{1i} \in \{T_{11}, \ldots, T_{1n}\}$, and $\Gamma \vdash_{\cap CC} \lambda x : T_{21} \cap \ldots \cap T_{2n} \cdot e_2 \leadsto \lambda x : T_{21} \cap \ldots \cap T_{2n} \cdot e_2' : T_{2i} \to T_2$, such that $T_{2i} \in \{T_{21}, \ldots, T_{2n}\}$, and $\lambda x : T_{11} \cap \ldots \cap T_{1n} \cdot e_1 \sqsubseteq \lambda x : T_{21} \cap \ldots \cap T_{2n} \cdot e_2$ then by the definition of C-Abs', $\Gamma, x : T_{1i} \vdash_{\cap CC} e_1 \leadsto e_1' : T_1$ and $\Gamma, x : T_{2i} \vdash_{\cap CC} e_2 \leadsto e_2' : T_2$ and by the definition of \sqsubseteq , $T_{11} \cap \ldots \cap T_{1n} \sqsubseteq T_{21} \cap \ldots \cap T_{2n}$ and $T_{2n} \cap T_{2n} \cap T_{2n} \cap T_{2n} \cap T_{2n} \cap T_{2n}$. Therefore, by the definition of \sqsubseteq , $\lambda x : T_{11} \cap \ldots \cap T_{1n} \cdot e_1' \sqsubseteq \lambda x : T_{21} \cap \ldots \cap T_{2n} \cdot e_2' \cap T_{2n} \cap T_{2n}$
- Rule C-App. If $\Gamma \vdash_{\cap CC} e_{11} e_{12} \leadsto e''_{11} e''_{12} : T_1 \text{ and } \Gamma \vdash_{\cap CC} e_{21} e_{22} \leadsto e''_{21} e''_{22} : T_2 \text{ and } e_{11} e_{12} \sqsubseteq e_{21} e_{22} \text{ then by rule C-App, } \Gamma \vdash_{\cap CC} e_{11} \leadsto e'_{11} : PM_1 \text{ and } PM_1 \rhd T_{11} \cap \ldots \cap T_{1n} \to T_1 \text{ and } \Gamma \vdash_{\cap CC} e_{12} \leadsto e'_{12} : T'_{11} \cap \ldots \cap T'_{1n} \text{ and } T'_{11} \cap \ldots \cap T'_{1n} \sim T_{11} \cap \ldots \cap T_{1n} \text{ and } PM_1 \unlhd S_{11} \text{ and } T_{11} \cap \ldots \cap T_{1n} \to T_1 \unlhd S_{12} \text{ and } T'_{11} \cap \ldots \cap T'_{1n} \subseteq S_{13} \text{ and } T_{11} \cap \ldots \cap T_{1n} \subseteq S_{14} \text{ and } S_{11}, S_{12}, e'_{11} \hookrightarrow e''_{11} \text{ and } S_{13}, S_{14}, e'_{12} \hookrightarrow e''_{12} \text{ and } \Gamma \vdash_{\cap CC} e_{21} \leadsto e'_{21} : PM_2 \text{ and } PM_2 \rhd T_{21} \cap \ldots \cap T_{2n} \to T_2 \text{ and } \Gamma \vdash_{\cap CC} e_{22} \leadsto e'_{22} : T'_{21} \cap \ldots \cap T'_{2n} \text{ and } T'_{21} \cap \ldots \cap T'_{2n} \simeq T_{21} \cap \ldots \cap T_{2n} \text{ and } PM_2 \unlhd S_{21} \text{ and } T_{21} \cap \ldots \cap T_{2n} \to T_2 \unlhd S_{22} \text{ and } T'_{21} \cap \ldots \cap T'_{2n} \subseteq S_{23} \text{ and } T_{21} \cap \ldots \cap T_{2n} \subseteq S_{24} \text{ and } T_{21} \cap \ldots \cap T_{2n} \subseteq S_{24} \text{ and } T_{21} \cap \ldots \cap T_{2n} \subseteq S_{24} \text{ and } T'_{21} \cap \ldots \cap T'_{2n} \subseteq S_{24} \text{ and$

 $S_{21},\ S_{22},\ e'_{21}\hookrightarrow e''_{21}$ and $S_{23},\ S_{24},\ e'_{22}\hookrightarrow e''_{22}$. As, by the definition of \sqsubseteq , $e_{11}\sqsubseteq e_{21}$ and $e_{12}\sqsubseteq e_{22}$ then by the induction hypothesis, $e'_{11}\sqsubseteq e'_{21}$ and $PM_1\sqsubseteq PM_2$ and $e'_{12}\sqsubseteq e'_{22}$ and $T'_{11}\cap\ldots\cap T'_{1n}\sqsubseteq T'_{21}\cap\ldots\cap T'_{2n}$. By the definition of \triangleright , we have that $PM_1=T_{11}\cap\ldots\cap T_{1n}\to T_1$ and $PM_2=T_{21}\cap\ldots\cap T_{2n}\to T_2$ and so $T_{11}\cap\ldots\cap T_{1n}\to T_1\sqsubseteq T_{21}\cap\ldots\cap T_{2n}\to T_2$ and therefore by the definition of \sqsubseteq , $T_1\sqsubseteq T_2$. As by the definition of \preceq , $T_1\sqsubseteq T_2$, and $T_1\sqsubseteq T_2$, and $T_1\sqsubseteq T_2$, then by the definition of T_1 , T_1 , T_1 , T_2 , T_2 , and T_1 , T_2 , T_3 , and T_4 , T_4 , T_5 , T_7 ,

- Rule C-Gen. If $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : T_{11} \cap \ldots \cap T_{1n}$ and $\Gamma \vdash_{\cap CC} e_2 \leadsto e'_2 : T_{21} \cap \ldots \cap T_{2n}$ and $e_1 \sqsubseteq e_2$ then by rule C-Gen, $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : T_{11}$ and ... and $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : T_{1n}$ and $\Gamma \vdash_{\cap CC} e_2 \leadsto e'_2 : T_{21}$ and ... and $\Gamma \vdash_{\cap CC} e_2 \leadsto e'_2 : T_{2n}$. By the induction hypothesis, $e'_1 \sqsubseteq e'_2$ and $T_{11} \sqsubseteq T_{21}$ and ... and $T_{1n} \sqsubseteq T_{2n}$, and therefore by the definition of \sqsubseteq , $T_{11} \cap \ldots \cap T_{1n} \sqsubseteq T_{21} \cap \ldots \cap T_{2n}$.
- Rule C-Inst. If $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : T_{1i}$ and $\Gamma \vdash_{\cap CC} e_2 \leadsto e'_2 : T_{2i}$ and $e_1 \sqsubseteq e_2$ then by rule C-Inst, $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : T_{11} \cap \ldots \cap T_{1n}$ and $\Gamma \vdash_{\cap CC} e_2 \leadsto e'_2 : T_{21} \cap \ldots \cap T_{2n}$. By the induction hypothesis, $e'_1 \sqsubseteq e'_2$ and $T_{11} \cap \ldots \cap T_{1n} \sqsubseteq T_{21} \cap \ldots \cap T_{2n}$, and therefore, by the definition of \sqsubseteq , $T_{1i} \sqsubseteq T_{2i}$.

Corollary 1 (Monotonicity of cast insertion). Corollary of Theorem 4. If $\Gamma \vdash_{\cap CC} e_1 \leadsto e'_1 : T_1$ and $\Gamma \vdash_{\cap CC} e_2 \leadsto e'_2 : T_2$ and $e_1 \sqsubseteq e_2$ then $e'_1 \sqsubseteq e'_2$.

Theorem 5 (Conservative Extension). If e is fully static, then $e \longrightarrow_{\cap S} e' \iff e \longrightarrow_{\cap CC} e'$.

Proof. We proceed by induction on the length of the derivation tree of $\longrightarrow_{\cap S}$ and $\longrightarrow_{\cap CC}$ for the right and left direction of the implication, respectively. Base cases:

• Rule E-AppAbs. If $(\lambda x: T_1 \cap \ldots \cap T_n \cdot e) \ v \longrightarrow_{\cap S} [x \mapsto v]e$ and $(\lambda x: T_1 \cap \ldots \cap T_n \cdot e) \ v \longrightarrow_{\cap CC} [x \mapsto v]e$, then it is proved.

Induction step:

- Rule E-App1.
 - If $e_1 \ e_2 \longrightarrow_{\cap S} e'_1 \ e_2$ then by rule E-App1, $e_1 \longrightarrow_{\cap S} e'_1$. By the induction hypothesis, $e_1 \longrightarrow_{\cap CC} e'_1$. Therefore, by rule E-App1, $e_1 \ e_2 \longrightarrow_{\cap CC} e'_1 \ e_2$
 - If $e_1 \ e_2 \longrightarrow_{\cap CC} e'_1 \ e_2$ then by rule E-App1, $e_1 \longrightarrow_{\cap CC} e'_1$. By the induction hypothesis, $e_1 \longrightarrow_{\cap S} e'_1$. Therefore, by rule E-App1, $e_1 \ e_2 \longrightarrow_{\cap S} e'_1 \ e_2$
- Rule E-App2.
 - If $v_1 \ e_2 \longrightarrow_{\cap S} v_1 \ e_2'$ then by rule E-App2, $e_2 \longrightarrow_{\cap S} e_2'$. By the induction hypothesis, $e_2 \longrightarrow_{\cap CC} e_2'$. Therefore, by rule E-App2, $v_1 \ e_2 \longrightarrow_{\cap CC} v_1 \ e_2'$
 - If $v_1 \ e_2 \longrightarrow_{\cap CC} v_1 \ e_2'$ then by rule E-App2, $e_2 \longrightarrow_{\cap CC} e_2'$. By the induction hypothesis, $e_2 \longrightarrow_{\cap S} e_2'$. Therefore, by rule E-App2, $v_1 \ e_2 \longrightarrow_{\cap S} v_1 \ e_2'$

Lemma 2 (Type preservation of $\longrightarrow_{\cap IC}$). If $c \longrightarrow_{\cap IC} c$ and

• $\vdash_{\cap IC} c: T \ then \vdash_{\cap IC} c': T.$

• initialType(c) = T then initialType(c') = T.

Proof. We proceed by induction on the length of the derivation tree of $\longrightarrow_{\cap IC}$.

Base cases:

• Rule E-PushBlameIC.

- If $\vdash_{\cap IC}$ blame T_I T_F l_1 cl_1 : $T_1 \Rightarrow^{l_2} T_2$ cl_2 : T_2 and by rule E-PushBlameIC, blame T_I T_F l_1 cl_1 : $T_1 \Rightarrow^{l_2} T_2$ $^{cl_2} \longrightarrow_{\cap IC}$ blame T_I T_2 l_1 cl_1 , then by rule T-BlameIC, $\vdash_{\cap IC}$ blame T_I T_2 l_1 cl_1 : T_2 , then it is proved.
- By the definition of initial Type, $initial Type (blame\ T_I\ T_F\ l_1\ ^{cl_1}: T_1 \Rightarrow^{l_2} T_2\ ^{cl_2}) = T_I$. By rule E-PushBlameIC, $blame\ T_I\ T_F\ l_1\ ^{cl_1}: T_1 \Rightarrow^{l_2} T_2\ ^{cl_2} \longrightarrow_{\cap IC} blame\ T_I\ T_2\ l_1\ ^{cl_1}$. Since $initial Type (blame\ T_I\ T_2\ l_1\ ^{cl_1}) = T_I$, it is proved.

• Rule E-IdentityIC.

- If $\vdash_{\cap IC} c: T \Rightarrow^l T^{cl}: T$, then by rule T-SingleIC, $\vdash_{\cap IC} c: T$. By rule E-IdentityIC, $c: T \Rightarrow^l T^{cl} \longrightarrow_{\cap IC} c$.
- By the definitions of initial Type, $initial Type(c:T\Rightarrow^l T^{cl})=initial Type(c)$. By rule E-IdentityIC, $c:T\Rightarrow^l T^{cl}\longrightarrow_{\cap IC} c$.

• Rule E-SucceedIC.

- If $\vdash_{\cap IC} c: G \Rightarrow^{l_1} Dyn \stackrel{cl_1}{:} Dyn \Rightarrow^{l_2} G \stackrel{cl_2}{:} G$, then by rule T-SingleIC, $\vdash_{\cap IC} c: G$. By rule E-SucceedIC, $c: G \Rightarrow^{l_1} Dyn \stackrel{cl_1}{:} Dyn \Rightarrow^{l_2} G \stackrel{cl_2}{:} \longrightarrow_{\cap IC} c$.
- Rule E-SucceedIC. By the definition of initialType, $initialType(c: G \Rightarrow^{l_1} Dyn \stackrel{cl_1}{\Rightarrow^{l_2}} G \stackrel{cl_2}{\Rightarrow^{l_1}} = initialType(c)$. By rule E-SucceedIC, $c: G \Rightarrow^{l_1} Dyn \stackrel{cl_1}{\Rightarrow^{l_2}} : Dyn \Rightarrow^{l_2} G \stackrel{cl_2}{\xrightarrow{}} \longrightarrow_{\cap IC} c$. Therefore it is proved.

• Rule E-FailIC.

- If $\vdash_{\cap IC} c: G_1 \Rightarrow^{l_1} Dyn \stackrel{cl_1}{\Rightarrow} : Dyn \Rightarrow^{l_2} G_2 \stackrel{cl_2}{\Rightarrow} : G_2$, and by rule E-FailIC, $c: G_1 \Rightarrow^{l_1} Dyn \stackrel{cl_1}{\Rightarrow} : Dyn \Rightarrow^{l_2} G_2 \stackrel{cl_2}{\longleftrightarrow} \longrightarrow_{\cap IC} blame T_I G_2 \ l_2 \stackrel{cl_1}{\longleftrightarrow} : G_2$.
- By the definition of initial Type, $initial Type(c:G_1 \Rightarrow^{l_1} Dyn^{cl_1}:Dyn \Rightarrow^{l_2} G_2^{cl_2}) = T_I$. By rule E-FailIC, $c:G_1 \Rightarrow^{l_1} Dyn^{cl_1}:Dyn \Rightarrow^{l_2} G_2^{cl_2} \longrightarrow_{\cap IC} blame\ T_I\ G_2\ l_2^{cl_1}$, then $initial Type(blame\ T_I\ G_2\ l_2^{cl_1}) = T_I$.

• Rule E-GroundIC.

- $\text{ If } \vdash_{\cap IC} c: T \Rightarrow^l Dyn \stackrel{cl}{} : Dyn \text{ then by rule T-SingleIC}, \vdash_{\cap IC} c: T. \text{ By rule E-GroundIC}, \\ c: T \Rightarrow^l Dyn \stackrel{cl}{} \longrightarrow_{\cap IC} c: T \Rightarrow^l G \stackrel{cl}{} : G \Rightarrow^l Dyn \stackrel{cl}{} \text{, then by rule T-SingleIC}, \\ \vdash_{\cap IC} c: T \Rightarrow^l G \stackrel{cl}{} : G \Rightarrow^l Dyn \stackrel{cl}{} : Dyn.$
- By the definition of initialType, $initialType(c:T\Rightarrow^l Dyn^{cl})=initialType(c)$. By rule E-GroundIC, $c:T\Rightarrow^l Dyn^{cl}\longrightarrow_{\cap IC} c:T\Rightarrow^l G^{cl}:G\Rightarrow^l Dyn^{cl}$, then $initialType(c:T\Rightarrow^l G^{cl}:G\Rightarrow^l Dyn^{cl})=initialType(c)$.

• Rule E-ExpandIC.

- If $\vdash_{\cap IC} c: Dyn \Rightarrow^l T^{cl}: T$ then by rule T-SingleIC, $\vdash_{\cap IC} c: Dyn$. By rule E-ExpandIC, $c: Dyn \Rightarrow^l T^{cl} \xrightarrow{}_{\cap IC} c: Dyn \Rightarrow^l G^{cl}: G \Rightarrow^l T^{cl}$, then by rule T-SingleIC, $\vdash_{\cap IC} c: Dyn \Rightarrow^l G^{cl}: G \Rightarrow^l T^{cl}: T$.
- By the definition of initialType, $initialType(c:Dyn\Rightarrow^l T^{cl})=initialType(c)$. By rule E-ExpandIC, $c:Dyn\Rightarrow^l T^{cl}\longrightarrow_{\cap IC} c:Dyn\Rightarrow^l G^{cl}:G\Rightarrow^l T^{cl}$. Since $initialType(c:Dyn\Rightarrow^l G^{cl}:G\Rightarrow^l T^{cl})=initialType(c)$, it is proved.

Induction step:

- Rule E-EvaluateIC.
 - If $\vdash_{\cap IC} c: T_1 \Rightarrow^l T_2 \stackrel{cl}{:} T_2$ then by rule T-SingleIC, $\vdash_{\cap IC} c: T_1$. By rule E-EvaluateIC, $c \xrightarrow{}_{\cap IC} c'$. By the induction hypothesis, $\vdash_{\cap IC} c': T_1$. By rule E-EvaluateIC, $c: T_1 \Rightarrow^l T_2 \stackrel{cl}{:} t_1 \Rightarrow^l T_2 \stackrel{cl}{:} t_2$.
 - By the definition of initialType, $initialType(c: T_1 \Rightarrow^l T_2 \stackrel{cl}{}) = initialType(c)$. By rule E-EvaluateIC, $c \longrightarrow_{\cap IC} c'$. By the induction hypothesis, initialType(c') = initialType(c). By rule E-EvaluateIC, $c: T_1 \Rightarrow^l T_2 \stackrel{cl}{} \longrightarrow_{\cap IC} c': T_1 \Rightarrow^l T_2 \stackrel{cl}{}$. Since $initialType(c': T_1 \Rightarrow^l T_2 \stackrel{cl}{}) = initialType(c')$, it is proved.

П

Lemma 3 (Progress of $\longrightarrow_{\cap IC}$). If $\Gamma \vdash_{\cap IC} c : T$ and $initialType(c) = T_I$ then either c is a cast value or there exists a c' such that $c \longrightarrow_{\cap IC} c'$.

Proof. We proceed by induction on the length of the derivation tree of $\vdash_{\cap IC} c:T$.

Base cases:

- Rule T-BlameIC. As $\vdash_{\cap IC}$ blame T_I T_F l cl : T_F , initialType(blame T_I T_F l cl) = T_I and blame T_I T_F l cl is a cast value, it is proved.
- Rule T-EmptyIC. As $\vdash_{\cap IC} \varnothing \ T^{\ cl}: T, \ initial Type(\varnothing \ T^{\ cl}) = T \ \text{and} \ \varnothing \ T^{\ cl}$ is a cast value, it is proved.

- Rule T-SingleIC. If $\vdash_{\cap IC} c: T_1 \Rightarrow^l T_2 \ ^c l: T_2$ and $initialType(c: T_1 \Rightarrow^l T_2 \ ^c l) = T_I$ then by rule T-SingleIC, $\vdash_{\cap IC} c: T_1$ and $initialType(c) = T_I$. By the induction hypothesis, either c is a cast value or there is a c' such that $c \longrightarrow_{\cap IC} c'$. If c is a cast value, then c can either be of the form $blame\ T_I\ T_F\ l^{\ cl}$, in which case by rule E-PushBlameIC, $blame\ T_I\ T_F\ l^{\ cl}: T_1 \Rightarrow^{l_2} T_2 \ ^{cl_2} \longrightarrow_{\cap IC} blame\ T_I\ T_2\ l^{\ cl}$ or c is a cast value 1 or is an empty cast. If c is a cast value 1 or is an empty cast then $c: T_1 \Rightarrow^l T_2 \ ^{cl}$ can be of one of the following forms:
 - $-c:T\Rightarrow^l T^{cl}$. Then by rule E-IdentityIC, $c:T\Rightarrow^l T^{cl}\longrightarrow_{\cap IC} c$.
 - $-c: G \Rightarrow^{l_1} Dyn^{cl_1}: Dyn \Rightarrow^{l_2} G^{cl_2}$. Then by rule E-SucceedIC, $c: G \Rightarrow^{l_1} Dyn^{cl_1}: Dyn \Rightarrow^{l_2} G^{cl_2} \longrightarrow_{OIC} c$.
 - $-c:G_1\Rightarrow^{l_1}Dyn^{cl_1}:Dyn\Rightarrow^{l_2}G_2^{cl_2}.$ Then by rule E-FailIC, $c:G_1\Rightarrow^{l_1}Dyn^{cl_1}:Dyn\Rightarrow^{l_2}G_2^{cl_2}\longrightarrow_{\cap IC}blame\ T_I\ G_2\ l_2^{cl_1}.$
 - $-c:T\Rightarrow^{l} Dyn^{cl}.$ Then by rule E-GroundIC, $c:T\Rightarrow^{l} Dyn^{cl}\longrightarrow_{\cap IC}c:T\Rightarrow^{l} G^{cl}:G\Rightarrow^{l} Dyn^{cl}.$

 $-c: Dyn \Rightarrow^l T^{cl}$. Then by rule E-ExpandIC, $c: Dyn \Rightarrow^l T^{cl} \longrightarrow_{\cap IC} c: Dyn \Rightarrow^l G^{cl}: G \Rightarrow^l T^{cl}$.

If there is a c' such that $c \longrightarrow_{\cap IC} c'$, then by rule E-EvaluateIC, $c: T_1 \Rightarrow^l T_2 \ ^c l \longrightarrow_{\cap IC} c': T_1 \Rightarrow^l T_2 \ ^c l$.

Lemma 4 (Type preservation of $\longrightarrow_{\cap CC}$). Depends on Lemmas 2 and 3. If $\Gamma \vdash_{\cap CC} e : T_1 \cap \ldots \cap T_n$ and $e \longrightarrow_{\cap CC} e'$ then $\Gamma \vdash_{\cap CC} e' : T_1 \cap \ldots \cap T_m$ such that $m \leq n$.

Proof. We proceed by induction on the length of the derivation tree of $\longrightarrow_{\cap CC}$.

Base cases:

- Rule E-PushBlame1. If $\Gamma \vdash_{\cap CC} blame_{T_2} l \ e_2 : T_1 \text{ and } blame_{T_2} \ l \ e_2 \longrightarrow_{\cap CC} blame_{T_1} \ l \text{ then by rule T-Blame, } \Gamma \vdash_{\cap CC} blame_{T_1} \ l : T_1.$
- Rule E-PushBlame2. If $\Gamma \vdash_{\cap CC} e_1 \ blame_{T_2} \ l : T_1 \ and \ e_1 \ blame_{T_2} \ l \longrightarrow_{\cap CC} blame_{T_1} \ l \ then by rule T-Blame, <math>\Gamma \vdash_{\cap CC} blame_{T_1} \ l : T_1$.
- Rule E-PushBlameCast. If $\Gamma \vdash_{\cap CC} blame_T \ l : c_1 \cap \ldots \cap c_n : T_1 \cap \ldots \cap T_n$ and $blame_T \ l : c_1 \cap \ldots \cap c_n \longrightarrow_{\cap CC} blame_{T_1 \cap \ldots \cap T_n} \ l$ then by rule T-Blame, $\Gamma \vdash_{\cap CC} blame_{T_1 \cap \ldots \cap T_n} \ l : T_1 \cap \ldots \cap T_n$.
- Rule E-AppAbs. There exists a type $T_1 \cap \ldots \cap T_n$ such that we can deduce $\Gamma \vdash_{\cap CC} (\lambda x : T_1 \cap \ldots \cap T_n \cdot e) v : T$ from $\Gamma \vdash_{\cap CC} \lambda x : T_1 \cap \ldots \cap T_n \cdot e : T_1 \cap \ldots \cap T_n \to T$ and $\Gamma \vdash_{\cap CC} v : T_1 \cap \ldots \cap T_n$ (x does not occur in Γ). Moreover, $\Gamma \vdash_{\cap CC} \lambda x : T_1 \cap \ldots \cap T_n \cdot e : T_1 \cap \ldots \cap T_n \to T$ only if $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap CC} e : T$. By rule E-AppAbs, $(\lambda x : T_1 \cap \ldots \cap T_n \cdot e) v \longrightarrow_{\cap CC} [x \mapsto v]e$. To obtain $\Gamma \vdash_{\cap CC} [x \mapsto v]e : T$, it is sufficient to replace, in the proof of $\Gamma, x : T_1 \cap \ldots \cap T_n \vdash_{\cap CC} e : T$, the statements $x : T_i$ (introduzed by the rules T-Var and T-Inst) by the deductions of $\Gamma \vdash_{\cap CC} v : T_i$ for $1 \le i \le n$. (Proof adapted from [1])
- Rule E-SimulateArrow. If $\Gamma \vdash_{\cap CC} (v_1: cv_1 \cap \ldots \cap cv_n) \ v_2: T_{12} \cap \ldots \cap T_{n2}$, then by rule T-App', $\Gamma \vdash_{\cap CC} v_1: cv_1 \cap \ldots \cap cv_n: T_1 \cap \ldots \cap T_n$ such that $\exists i \in 1...n \ T_i = T_{i1} \to T_{i2}$ and $\Gamma \vdash_{\cap CC} v_2: T_{11} \cap \ldots \cap T_{n1}$. As $\Gamma \vdash_{\cap CC} v_1: cv_1 \cap \ldots \cap cv_n: T_1 \cap \ldots \cap T_n$, then by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} v_1: T_1'' \cap \ldots \cap T_1''$ and $\vdash_{\cap IC} cv_1: T_1$ and \ldots and $\vdash_{\cap IC} cv_n: T_n$ and $I_1 = initialType(cv_1)$ and \ldots and $I_n = initialType(cv_n)$ such that $\{I_1, \ldots, I_n\} \subseteq \{T_1'', \ldots, T_1''\}$ and $I_1 \cap \ldots \cap I_n = T_1'' \cap \ldots \cap T_n''$ and $n \leq l$. For the sake of simplicity lets elide cast labels and blame labels. By the definition of SimulateArrow, we have that $c'_1 = c''_1: T'_{11} \to T'_{12} \Rightarrow T_{11} \to T_{12}$ and \ldots and $c'_m = c''_m: T'_{m1} \to T'_{m2} \Rightarrow T_{m1} \to T_{m2}$, for some $m \leq n$. Also, $c_{11} = \varnothing T_{11}: T_{11} \Rightarrow T'_{11}$ and \ldots and $c_{m1} = \varnothing T_{m1}: T_{m1} \Rightarrow T'_{m1}$ and $c_{12}: \varnothing T'_{12}: T'_{12} \Rightarrow T_{12}$ and \ldots and $c_{m2} = \varnothing T'_{m2}: T'_{m2} \Rightarrow T_{m2}$ and $initialType(c_1^s) = I_1$ and \ldots and $initialType(c_m^s) = I_m$ and $\vdash_{\cap IC} c_1^s: T'_{11} \to T'_{12}$ and \ldots and $\vdash_{\cap IC} c_1^s: T'_{m1} \to T'_{m2}$. As by rule T-Gen and T-Inst $\Gamma \vdash_{\cap CC} v_1: T''_1 \cap \ldots \cap T''_m$ and $I_1 \cap \ldots \cap I_m = T''_1 \cap \ldots \cap T''_m$, then by rule T-Gen and T-Inst $\Gamma \vdash_{\cap CC} v_1: c_1^s \cap \ldots \cap c_m^s: T'_{11} \to T'_{12} \cap \ldots \cap T'_{m1}$, then by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} v_2: t_{11} \cap \ldots \cap t_{m1} = t_{11} \cap t_{12} \cap t_{13} \cap t_{14} \cap t_{15} \cap t_{1$

- By rule E-SimulateArrow, $(v_1: cv_1 \cap \ldots \cap cv_n)$ $v_2 \longrightarrow_{\cap CC} (v_1: c_1^s \cap \ldots \cap c_m^s)$ $(v_2: c_{11} \cap \ldots \cap c_{m1}): c_{12} \cap \ldots \cap c_{m2}$, therefore it is proved.
- Rule E-MergeCasts. If $\Gamma \vdash_{\cap CC} v : cv_1 \cap \ldots \cap cv_n : c'_1 \cap \ldots \cap c'_m : F'_1 \cap \ldots \cap F'_m$ then by rule T-IntersectionCasts, $\Gamma \vdash_{\cap CC} v : cv_1 \cap \ldots \cap cv_n : F_1 \cap \ldots \cap F_n$ and $\vdash_{\cap IC} c'_1 : F'_1$ and \ldots and $\vdash_{\cap IC} c'_m : F'_m$ and $initialType(c'_1) = I'_1$ and $initialType(c'_m) = I'_m$ such that $\{I'_1, \ldots, I'_m\} \subseteq \{F_1, \ldots, F_n\}$ and $I'_1 \cap \ldots \cap I'_m = F_1 \cap \ldots \cap F_m$ and $m \leq n$. As $\Gamma \vdash_{\cap CC} v : cv_1 \cap \ldots \cap cv_n : F_1 \cap \ldots \cap F_n$ then by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} v : T_1 \cap \ldots \cap T_l$ and $\vdash_{\cap IC} cv_1 : F_1$ and \ldots and $\vdash_{\cap IC} cv_n : F_n$ and $initialType(cv_1) : I_1$ and \ldots and $initialType(cv_n) : I_n$ such that $\{I_1, \ldots, I_n\} \subseteq \{T_1, \ldots, T_l\}$ and $I_1 \cap \ldots \cap I_n \subseteq T_1 \cap \ldots \cap T_n$ and $n \leq l$. By the definition of mergeCasts, $\vdash_{\cap IC} c''_1 : F''_1$ and \ldots and $\vdash_{\cap IC} c''_1 : F''_2$ and $initialType(c''_1) = I''_1$ and \ldots and $initialType(c''_1) = I''_1$ and \ldots and $initialType(c''_1) = I''_2$ such that $\{I''_1, \ldots, I''_j\} \subseteq \{T_1, \ldots, T_l\}$ and $I''_1 \cap \ldots \cap I''_j = T_1 \cap \ldots \cap T_j$ and $\{F'''_1, \ldots, F''_j\} \subseteq \{F'_1, \ldots, F'_m\}$ and $F'''_1 \cap \ldots \cap F''_j = F'_1 \cap \ldots \cap F'_j$ and $j \leq l$ and $j \leq m$. By rule T-Gen and T-Inst, $\Gamma \vdash_{\cap CC} v : T_1 \cap \ldots \cap T_j$ and therefore by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} v : C''_1 \cap \ldots \cap C''_j : F''_1 \cap \ldots \cap F''_j$. By rule E-MergeCasts, $v : cv_1 \cap \ldots \cap cv_n : c'_1 \cap \ldots \cap c'_m \longrightarrow_{\cap CC} v : c''_1 \cap \ldots \cap c''_j$.
- Rule E-EvaluateCasts. If $\Gamma \vdash_{\cap CC} v : c_1 \cap \ldots \cap c_n : T_1 \cap \ldots \cap T_n$ then by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} v : T'_1 \cap \ldots \cap T'_n$ and $\vdash_{\cap IC} c_1 : T_1$ and \ldots and $\vdash_{\cap IC} c_n : T_n$ and $I_1 = initialType(c_1)$ and \ldots and $I_n = initialType(c_n)$ and $I_1 \cap \ldots \cap I_n = T'_1 \cap \ldots \cap T'_n$. By rule E-EvaluateCasts, $c_1 \longrightarrow_{\cap IC} cv_1$ and \ldots and $c_n \longrightarrow_{\cap IC} cv_n$. By Lemmas 2 and 3, $\vdash_{\cap IC} cv_1 : T_1$ and $initialType(cv_1) = I_1$ and \ldots and $\vdash_{\cap IC} cv_n : T_n$ and $initialType(cv_n) = I_n$. Therefore by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} v : cv_1 \cap \ldots \cap cv_n : T_1 \cap \ldots \cap T_n$. By rule E-EvaluateCasts, $v : c_1 \cap \ldots \cap c_n \longrightarrow_{\cap CC} v : cv_1 \cap \ldots \cap cv_n$.
- Rule E-PropagateBlame. If $\Gamma \vdash_{\cap CC} v : blame \ T_1' \ T_1 \ l_1 \ ^{m_1} \cap \ldots \cap blame \ T_n' \ T_n \ l_n \ ^{m_n} : T_1 \cap \ldots \cap T_n$ and by rule E-PropagateBlame $v : blame \ T_1' \ T_1 \ l_1 \ ^{m_1} \cap \ldots \cap blame \ T_n' \ T_n \ l_n \ ^{m_n} \longrightarrow_{\cap CC} blame_{(T_1 \cap \ldots \cap T_n)} \ l_1 : T_1 \cap \ldots \cap T_n$.
- Rule E-RemoveEmpty. If $\Gamma \vdash_{\cap CC} v : \varnothing \ T_1 \ ^{m_1} \cap \ldots \cap \varnothing \ T_n \ ^{m_n} : T_1 \cap \ldots \cap T_n$, then by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} v : T_1 \cap \ldots \cap T_n$ and $\vdash_{\cap IC} \varnothing \ T_1 \ ^{m_1} : T_1$ and \ldots and $\vdash_{\cap IC} \varnothing \ T_n \ ^{m_n} : T_n$ and $initialType(\varnothing \ T_1 \ ^{m_1}) = T_1$ and \ldots and $initialType(\varnothing \ T_n \ ^{m_n}) = T_n$. Therefore, by rule E-RemoveEmpty, $v : \varnothing \ T_1 \ ^{m_1} \cap \ldots \cap \varnothing \ T_n \ ^{m_n} \longrightarrow_{\cap CC} v$.

- Rule E-App1. There are two possibilities:
 - If $\Gamma \vdash_{\cap CC} e_1 e_2 : T$, then by rule T-App, $\Gamma \vdash_{\cap CC} e_1 : T_1 \cap \ldots \cap T_n \to T$ and $\Gamma \vdash_{\cap CC} e_2 : T_1 \cap \ldots \cap T_n$. By rule E-App1, $e_1 \longrightarrow_{\cap IC} e'_1$, so by the induction hypothesis, $\Gamma \vdash_{\cap CC} e'_1 : T_1 \cap \ldots \cap T_n \to T$. As by rule E-App1, $e_1 e_2 \longrightarrow_{\cap IC} e'_1 e_2$, then by rule T-App, $\Gamma \vdash_{\cap CC} e'_1 e_2 : T$.
 - If $\Gamma \vdash_{\cap CC} e_1 e_2 : T_{12} \cap \ldots \cap T_{n2}$, then by rule T-App', $\Gamma \vdash_{\cap CC} e_1 : T_{11} \to T_{12} \cap \ldots \cap T_{n1} \to T_{n2}$ and $\Gamma \vdash_{\cap CC} e_2 : T_{11} \cap \ldots \cap T_{n1}$. By rule E-App1, $e_1 \longrightarrow_{\cap IC} e'_1$, so by the induction hypothesis, $\Gamma \vdash_{\cap CC} e'_1 : T_{11} \to T_{12} \cap \ldots \cap T_{n1} \to T_{n2}$. As by rule E-App1, $e_1 e_2 \longrightarrow_{\cap IC} e'_1 e_2$, then by rule T-App', $\Gamma \vdash_{\cap CC} e'_1 e_2 : T_{12} \cap \cdots \cap T_{n2}$.
- Rule E-App2. There are two possibilities:
 - If $\Gamma \vdash_{\cap CC} v_1 \ e_2 : T$, then by rule T-App, $\Gamma \vdash_{\cap CC} v_1 : T_1 \cap \ldots \cap T_n \to T$ and $\Gamma \vdash_{\cap CC} e_2 : T_1 \cap \ldots \cap T_n$. By rule E-App2, $e_2 \longrightarrow_{\cap IC} e_2'$, so by the induction hypothesis, $\Gamma \vdash_{\cap CC} e_2' : T_1 \cap \ldots \cap T_n$. As by rule E-App2, $v_1 \ e_2 \longrightarrow_{\cap IC} v_1 \ e_2'$, then by rule T-App, $\Gamma \vdash_{\cap CC} v_1 \ e_2' : T$.

- If $\Gamma \vdash_{\cap CC} v_1 \ e_2 : T_{12} \cap \ldots \cap T_{n2}$, then by rule T-App', $\Gamma \vdash_{\cap CC} v_1 : T_{11} \to T_{12} \cap \ldots \cap T_{n1} \to T_{n2}$ and $\Gamma \vdash_{\cap CC} e_2 : T_{11} \cap \ldots \cap T_{n1}$. By rule E-App2, $e_2 \longrightarrow_{\cap IC} e_2'$, so by the induction hypothesis, $\Gamma \vdash_{\cap CC} e_2' : T_{11} \cap \ldots \cap T_{n1}$. As by rule E-App1, $v_1 \ e_2 \longrightarrow_{\cap IC} v_1 \ e_2'$, then by rule T-App', $\Gamma \vdash_{\cap CC} v_1 \ e_2' : T_{12} \cap \cdots \cap T_{n2}$.
- Rule E-Evaluate. If $\Gamma \vdash_{\cap CC} e : c_1 \cap \ldots \cap c_n : T_1 \cap \ldots \cap T_n$, then by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} e : T, \vdash_{\cap IC} c_1 : T_1 \text{ and } \ldots \text{ and } \vdash_{\cap IC} c_n : T_n \text{ and } initialType(c_1) \cap \ldots \cap initialType(c_n) = T$. By rule E-Evaluate, $e \longrightarrow_{\cap IC} e'$, so by the induction hypothesis, $\Gamma \vdash_{\cap CC} e' : T$. As by rule E-Evaluate, $e : c_1 \cap \ldots \cap c_n \longrightarrow_{\cap IC} e' : c_1 \cap \ldots \cap c_n$, then by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} e' : c_1 \cap \ldots \cap c_n : T_1 \cap \ldots \cap T_n$.

Lemma 5 (Progress of $\longrightarrow_{\cap CC}$). If $\Gamma \vdash_{\cap CC} e : T$ then either e is a value or there exists an e' such that $e \longrightarrow_{\cap CC} e'$.

Proof. We proceed by induction on the length of the derivation tree of $\Gamma \vdash_{\cap CC} e : T$.

Base cases:

- Rule T-Var. If $\Gamma \vdash_{\cap CC} x : T$, then x is a value.
- Rule T-Int. If $\Gamma \vdash_{\cap CC} n : Int$ then n is a value.
- Rule T-True. If $\Gamma \vdash_{\cap CC} true : Bool$ then true is a value.
- Rule T-False. If $\Gamma \vdash_{\cap CC} false : Bool$ then false is a value.

- Rule T-Abs. If $\Gamma \vdash_{\cap CC} \lambda x : T_1 \cap \ldots \cap T_n \cdot e : T_1 \cap \ldots \cap T_n \to T$ then $\lambda x : T_1 \cap \ldots \cap T_n \cdot e$ is a value.
- Rule T-Abs'. If $\Gamma \vdash_{\cap CC} \lambda x : T_1 \cap \ldots \cap T_n : e : T_i \to T$ then $\lambda x : T_1 \cap \ldots \cap T_n : e$ is a value.
- Rule T-App. If $\Gamma \vdash_{\cap CC} e_1 \ e_2 : T$ then by rule T-App, $\Gamma \vdash_{\cap CC} e_1 : T_1 \cap \ldots \cap T_n \to T$ and $\Gamma \vdash_{\cap CC} e_2 : T_1 \cap \ldots \cap T_n$. By the induction hypothesis, e_1 is either a value or there is a e'_1 such that $e_1 \longrightarrow_{\cap CC} e'_1$ and e_2 is either a value or there is a e'_2 such that $e_2 \longrightarrow_{\cap CC} e'_2$. If e_1 is a value, then by rule E-PushBlame1, $(blame_{T_2} \ l) \ e_2 \longrightarrow_{\cap CC} blame_{T_1} \ l$. If e_2 is a value, then by rule E-PushBlame2, $e_1 \ (blame_{T_2} \ l) \longrightarrow_{\cap CC} blame_{T_1} \ l$. If e_1 is not a value, then by rule E-App1, $e_1 \ e_2 \longrightarrow_{\cap CC} e'_1 \ e_2$. If e_1 is a value and e_2 is not a value, then by rule E-App2, $v_1 \ e_2 \longrightarrow_{\cap CC} v_1 \ e'_2$. If both e_1 and e_2 are values then e_1 must be an abstraction $(\lambda x : T_1 \cap \ldots \cap T_n \ . \ e)$, and by rule E-AppAbs $(\lambda x : T_1 \cap \ldots \cap T_n \ . \ e) \ v_2 \longrightarrow_{\cap CC} [x \mapsto v_2]e$.
- Rule T-Gen. If $\Gamma \vdash_{\cap CC} e : T_1 \cap \ldots \cap T_n$ then by rule T-Gen, $\Gamma \vdash_{\cap CC} e : T_1$ and \ldots and $\Gamma \vdash_{\cap CC} e : T_n$. By the induction hypothesis, either e is a value or there exists an e' such that $e \longrightarrow_{\cap CC} e'$.
- Rule T-Inst. If $\Gamma \vdash_{\cap CC} e : T_i$ then by rule T-Inst, $\Gamma \vdash_{\cap CC} e : T_1 \cap \ldots \cap T_n$, such that $T_i \in \{T_1, \ldots, T_n\}$. By the induction hypothesis, either e is a value or there exists an e' such that $e \longrightarrow_{\cap CC} e'$.

- Rule T-App'. If $\Gamma \vdash_{\cap CC} e_1 e_2 : T_{12} \cap \ldots \cap T_{n2}$ then by rule T-App', $\Gamma \vdash_{\cap CC} e_1 : T_{11} \to T_{12} \cap \ldots \cap T_{n1} \to T_{n2}$ and $\Gamma \vdash_{\cap CC} e_2 : T_{11} \cap \ldots \cap T_{n1}$. By the induction hypothesis, e_1 is either a value or there is a e'_1 such that $e_1 \longrightarrow_{\cap CC} e'_1$ and e_2 is either a value or there is a e'_2 such that $e_2 \longrightarrow_{\cap CC} e'_2$. If e_1 is a value, then by rule E-PushBlame1, $(blame_{T_2} \ l) \ e_2 \longrightarrow_{\cap CC} blame_{T_1} \ l$. If e_2 is a value, then by rule E-PushBlame2, $e_1 \ (blame_{T_2} \ l) \longrightarrow_{\cap CC} blame_{T_1} \ l$. If e_1 is not a value, then by rule E-App1, $e_1 \ e_2 \longrightarrow_{\cap CC} e'_1 \ e_2$. If e_1 is a value and e_2 is not a value, then by rule E-App2, $v_1 \ e_2 \longrightarrow_{\cap CC} v_1 \ e'_2$. If both e_1 and e_2 are values then e_1 must be an abstraction $(\lambda x : T_{11} \to T_{12} \cap \ldots \cap T_{n1} \to T_{n2} \ e)$, and by rule E-AppAbs $(\lambda x : T_{11} \to T_{12} \cap \ldots \cap T_{n1} \to T_{n2} \ e) \ v_2 \longrightarrow_{\cap CC} [x \mapsto v_2]e$.
- Rule T-IntersectionCast. If $\Gamma \vdash_{\cap CC} e : c_1 \cap \ldots \cap c_n : T_1 \cap \ldots \cap T_n$ then by rule T-IntersectionCast, $\Gamma \vdash_{\cap CC} e : T$. By the induction hypothesis, e is either a value, or there is an e' such that $e \longrightarrow_{\cap CC} e'$. If e is a value, then either by rule E-EvaluateCasts, $v : c_1 \cap \ldots \cap c_n \longrightarrow_{\cap CC} v : cv_1 \cap \ldots \cap cv_n$, or by rule E-PushBlameCast, $blame_T \ l : c_1 \cap \ldots \cap c_n \longrightarrow_{\cap CC} blame_{T_1 \cap \ldots \cap T_n} \ l$. If there is an e' such that $e \longrightarrow_{\cap CC} e'$, then by rule E-Evaluate, $e : c_1 \cap \ldots \cap c_n \longrightarrow_{\cap CC} e' : c_1 \cap \ldots \cap c_n$.
- Rule T-Blame. If $\Gamma \vdash_{\cap CC} blame_T \ l : T$ then $blame_T \ l$ is a value.

Theorem 6 (Type Safety of $\longrightarrow_{\cap CC}$). Depends on Lemmas 4 and 5. Both Type Preservation and Progress hold for $\longrightarrow_{\cap CC}$.

Proof. We have Type Preservation (by Lemma 4) and Progress (by Lemma 5) for $\longrightarrow_{\cap CC}$.

Theorem 7 (Blame Theorem). If $\Gamma \vdash_{\cap CC} e : T$ and $e \longrightarrow_{\cap CC}^* blame_T l$ then l is not a safe cast of e.

Theorem 8 (Gradual Guarantee). If $\Gamma \vdash_{\cap CC} e_1 : T_1 \text{ and } \Gamma \vdash_{\cap CC} e_2 : T_2 \text{ and } e_1 \sqsubseteq e_2 \text{ then:}$

- 1. if $e_2 \longrightarrow_{\cap CC} e'_2$ then $e_1 \longrightarrow_{\cap CC}^* e'_1$ and $e'_1 \sqsubseteq e'_2$.
- 2. if $e_1 \longrightarrow_{\cap CC} e'_1$ then either $e_2 \longrightarrow_{\cap CC}^* e'_2$ and $e'_1 \sqsubseteq e'_2$ or $e_2 \longrightarrow_{\cap CC}^* blame_{T_2} l$.
